GitHub Account

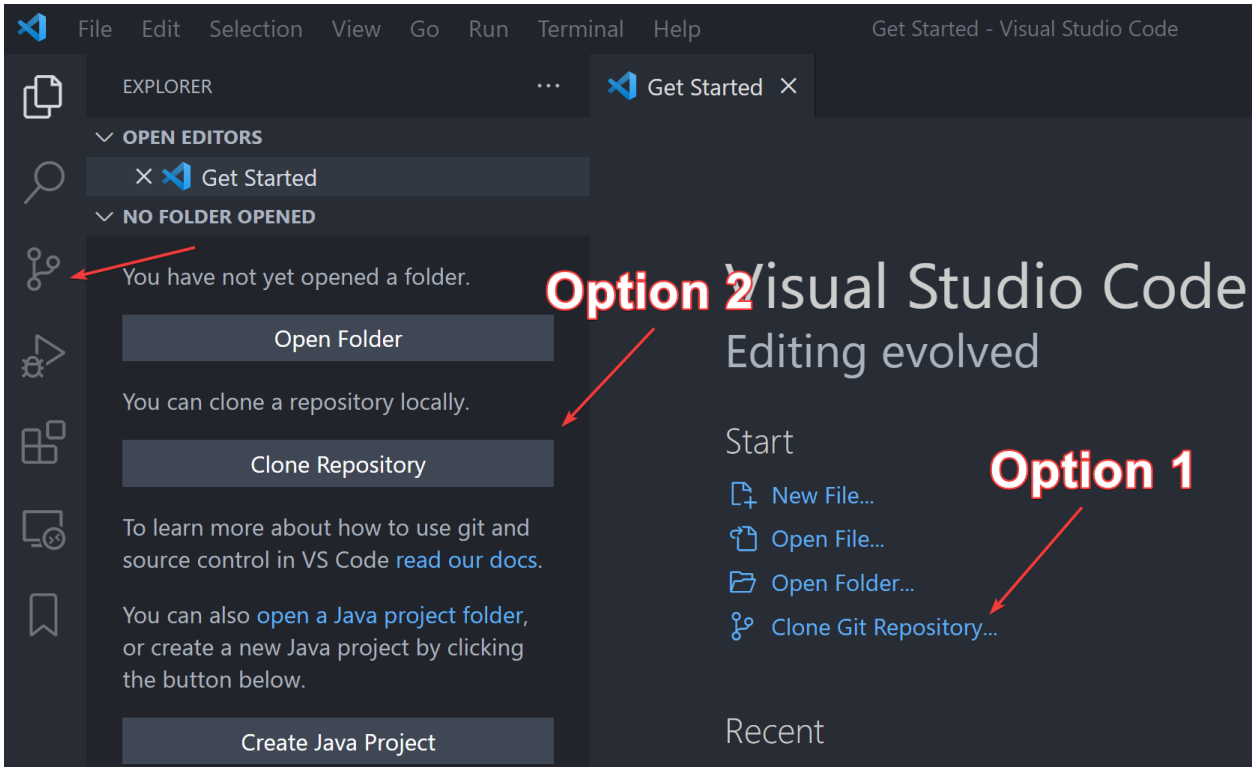

1. Create a GitHub account if you haven't already and share it with Mr. B so that you can be added to the Adambots team.
2. Once Mr. B adds you to the GitHub repository, you will get an invitation email. Accept it and you will receive access to the Sandbox repository.

Download the Code

1. Get the Git URL from the Sandbox repository page: https://github.com/Adambots-245/Sandbox.

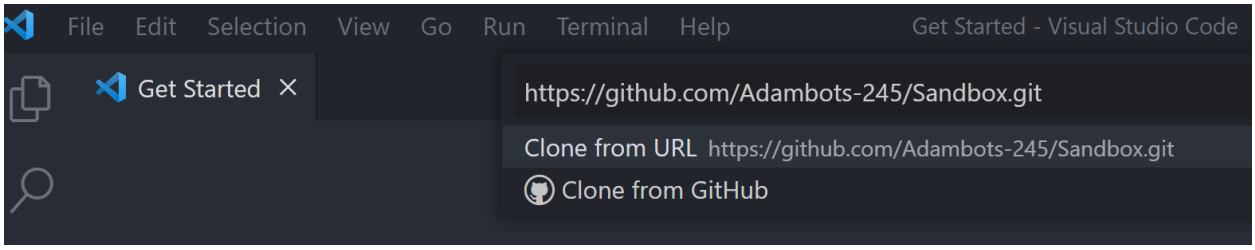

2. Click on Clone repository in Visual Studio Code (VS Code)

You may use Option 1 - “Clone Git Repository…” or , click on the 3rd icon on the left panel and then click on Clone Repository (Option 2).

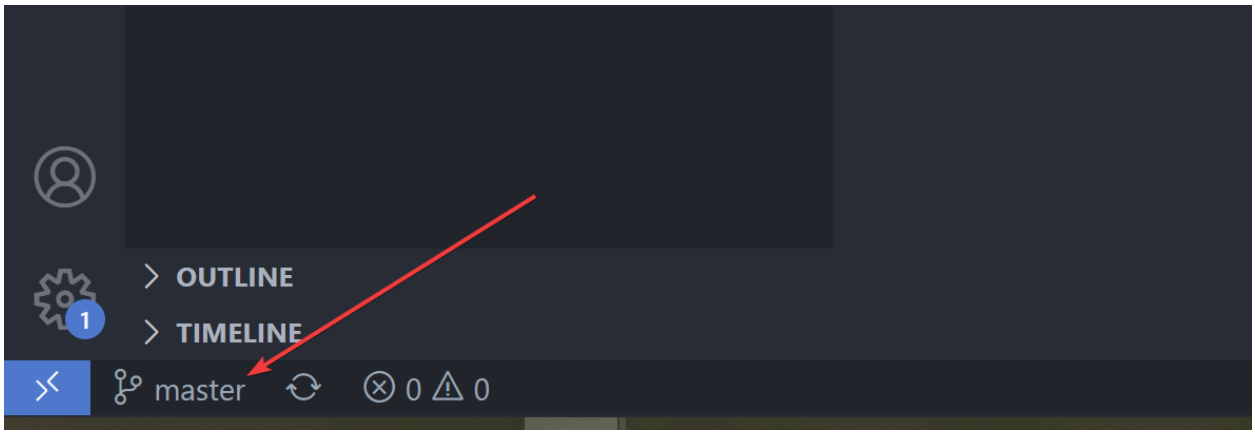

3. Enter the Git URL as shown below. Make sure that the URL ends with .git.

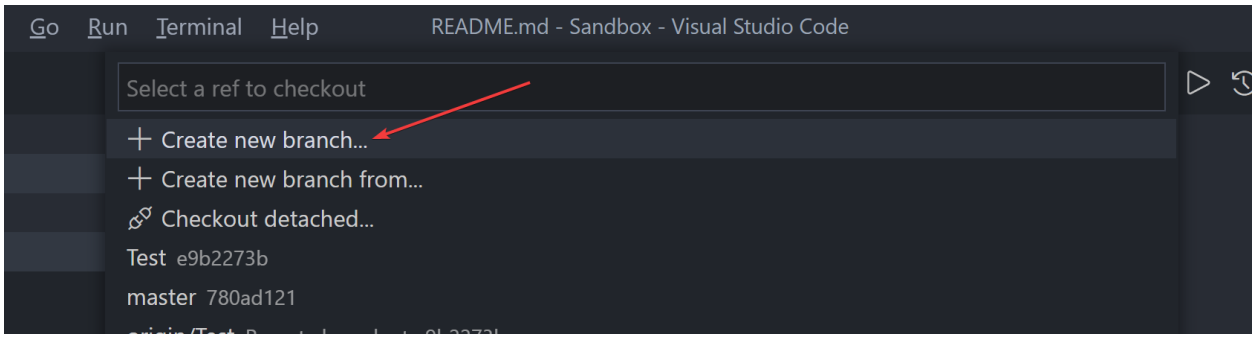

4. Press enter and it will prompt you to save the files to a folder. Specify a folder where you would like to download the repository to.

Create your own branch

1. Create a branch via Visual Studio. Click on the branch as shown below:

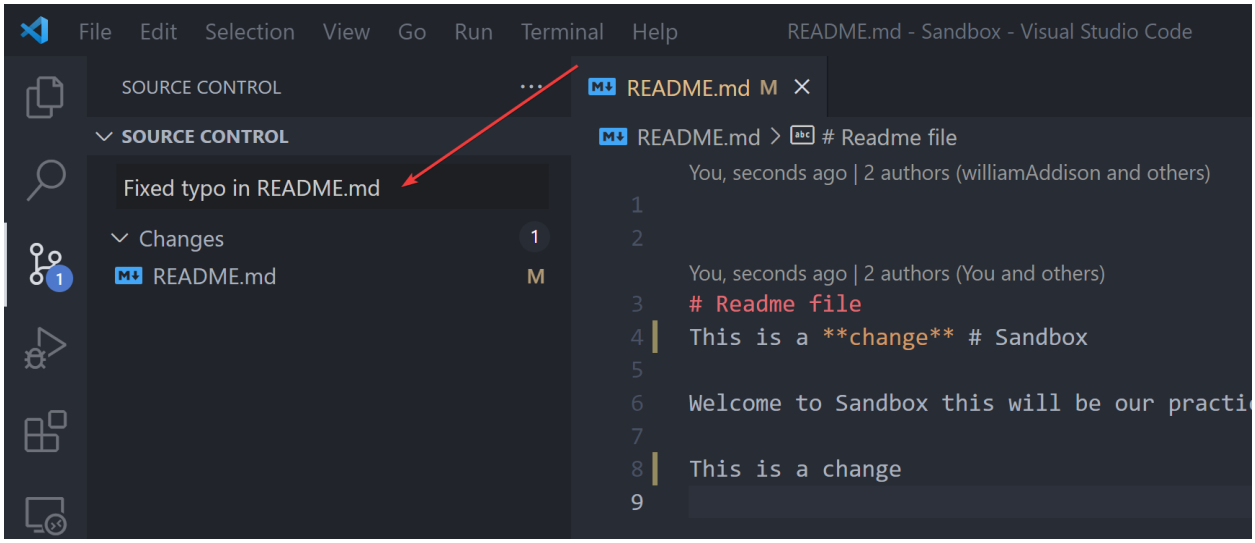

2. Click on “Create New Branch…” and enter a unique branch name. I recommend adding your name or your GitHub handle as the branch name.

3. The bottom bar now shows the new branch.

Make and Push Changes

1. You can modify the README.md or add a new text file. It can be any change to the repository. If you change the existing file, ensure that you save it.
2. Click on the Source Control button on the left panel (3rd icon from top).
3. Enter a message that signifies the changes you made (e.g. New file XX.txt added, fixed typo in README.md, etc.) in the Message box, and then press Ctrl+Enter to commit.

4. When it asks you to confirm staging files, choose “Yes”.
5. Click on the “...” next to Source Control and then choose “Pull”. This will ensure that any changes made by others are pulled into your repository. Then choose “Push” to push the committed changes to the GitHub repository.

Tag team and Practice

1. Connect with another Adambots teammate.
2. Ask him/her to switch to your branch.
3. Ask them to make changes to your files.
4. Push and pull to see the changes made.
5. You and your partner can make changes to the same file and same line to create conflicts and figure out a way to resolve it.
